Medial and/or lateral meniscal tear or other internal derangement

Medial and/or lateral ligament rupture

Anterior cruciate ligament rupture with/without meniscal tear

Posterior cruciate ligament rupture

Traumatic patellar dislocation

Patellar tendon rupture

Post-traumatic osteoarthritis

Fracture of the patella

Osteochondral fracture

Fracture involving the tibial condyle or femoral condyle

## Shoulder

Rotator cuff full thickness tear (rupture)

- +/- Biceps tendon high grade tear +/- Traumatic labral tear

Glenohumeral joint dislocation

AC joint dislocation

Fracture of the clavicale

Fracture of the humerus

Fracture of the glenoid

Post-traumatic osteoarthritis

## Lower back

Lumbar disc prolapse, or extrusion/radiculopathy Lumbar fracture

#### Other

Previous fracture (ACC funded surgery) that now requires removal of metalware

## How do you refer patients?

Add "ICP Referral" to referral letter title and/ or subject line

Include ACC 45 number (or claim number starting 100)

Attach relevant lodgement notes, radiology reports or other supporting info

EDI: habithut

Email: referrals@habit.health

Or use your current referral process

Specialist Referrals - From April 1, search Habit Health and use the embedded referral form for ICPMSK

## Referrals

#### Inclusion criteria:

- > Knee, Shoulder or Lumbar Spine injury
- Confirmed Cover (ACC45 or 100 number)
- > Injury within last 12 months
- > Confirmed or suspicious of an 'accepted diagnosis' - see list of diagnosis to the left

## Benefits for patients

Fully funded rehabilitation

Timely access to specialists and diagnostics

Cultural support from our dedicated in-house team (Ngā Kaihapai)

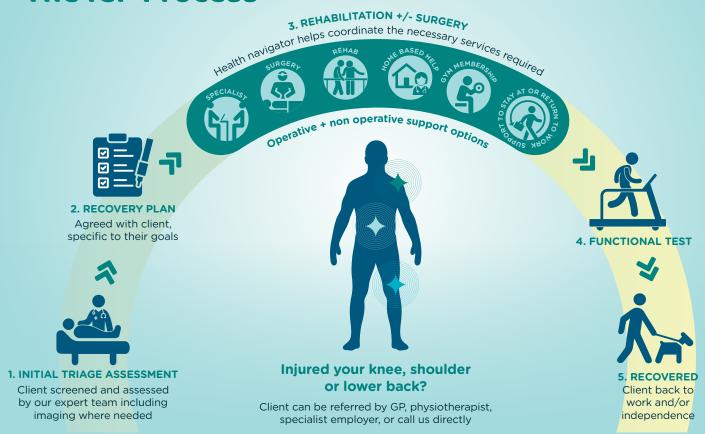

Patient-centered goal setting

Access to wide range of coordinated services.

If you are unsure - you can refer them to one of our physiotherapy clinics and we will review the eligibilty of their diagnosis.

## The ICP Process

# Patients can be referred using your PMS direct to Habit Health, via your current referral processes.

## It works like this:

## 1. Initial Triage Assessment

Patients will be seen by one of our senior physiotherapists and undergo a comprehensive musculoskeletal assessment which is reviewed by our IDT (including a specialist if required) to confirm the diagnosis and that they meet the entry criteria.

## 2. Recovery Plan

The rehabilitation team develops a recovery plan alongside the patient, identifying their specific goals.

## 3. Rehabilitation and Specialist Oversight

A dedicated health navigator will coordinate with the client, specialists, return-to-work providers and other team members. Your patient will see a specialist for review and surgical intervention if indicated. We work with over 200 specialists, 600 physios and a wide range allied health professionals across the entire country.

## 4. Recovery and Testing

A comprehensive physical assessment is completed once a patient meets their rehabilitation goals. This includes return to play testing, collection of PREMs and PROMs and the completion of a discharge summary.
